

Course files guide

From chapter 3 & onwards in this course, you'll have to take a couple of extra steps in order for the course files to work on your computer. I'll explain how to do this at the time, but here is also a quick reference as well.

1. Select the correct lesson from the branch dropdown on the GitHub repository
2. Click the green "code" button and then download the zip file of that lesson
3. Unzip the folder and open up the projects folder (not the lesson folder) in VS Code
4. Once in VS Code, open up a terminal (terminal → new terminal)
5. Run the command "npm install" in the terminal and hit enter
6. This will install all the project dependencies so that it will work correctly
